### EXAMINER'S AMENDMENT

1. An extension of time under 37 CFR 1.136(a) is required in order to make an examiner's amendment which places this application in condition for allowance. During a telephone conversation conducted on March 15, 2006, Applicant's attorney, Greg O'Bradovich requested an extension of time for 2 MONTH(S). Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claim 1, line 15, after "the gravitational" and before "feed from", delete "particulate".

In claim 1, line 17, after "airflow" and before "and combined", delete "decoupled from the high velocity forced air flow, in the secondary tube"

In claim 17, delete the entire claim and replace with:

A broadcast spreader attachment apparatus comprising:

a main tube having a diameter, a hollow interior for supporting high velocity forced airflow and having an intake end and a discharge end;

a supply hopper

a secondary tube connected to the main tube, and protruding into the hollow interior of the main tube so that an opening in the secondary tube is disposed in the approximate center of the hollow interior of the main tube and in the path of the velocity airflow,

Art Unit: 3752

wherein the secondary tube is connected to the main tube at a point downstream of the blower and having a diameter less than the diameter of the main tube creating a diameter differential for varying a gravitational feed rate from the hopper between the main tube and the secondary tube;

a particulate flow control connected to the secondary tube and upstream from the connection point of the main tube and secondary tube for further varying a flow differential between the main tube and secondary tube for further varying a flow differential between the main tube and the secondary tube, after material is dispensed from the supply hopper for effectively reducing particulate flow through the secondary tube;

a control knob connected to the material flow control for varying the effective flow;

means for providing airflow in the main tube; and

means for creating a combined flow of the airflow and the particulate flow.

2. The following is an examiner's statement of reasons for allowance: A broadcast spreader having a supply hopper fed into a secondary tube by gravitational feed, the secondary tube being inserted into a main tube, the main tube intake end being supplied with means for providing high velocity airflow, the connection point between the secondary tube and the main tube being downstream of the velocity airflow such that there is little or no damage to the particulate is not known or rendered obvious by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
